

LOWER COSTS LOW EMISSIONS: JULY 8, 2015 ERRATA

On page 2, the cost savings experienced by the average household was stated to range up to \$1,660 in 2040. Previously, we had we had been erroneously including Washington in the Great Lakes / Mid-Atlantic region. This has been corrected to show that the average household cost savings are estimated to range up to \$1,860 in 2040. A corrected Figure 3 is shown below.

Revised Figure 3. Regional cost savings per household compared to emission reductions in 2040

On page 4 and in Table 2, the Clean Energy Future scenario assumption for energy efficiency levels was erroneously stated to be 2 percent annual incremental savings achieved by 2020. This has been corrected to read 2 percent annual incremental savings achieved by 2029.

Note that this errata has also been applied to the report *Clean Energy Technical Review*, available at <http://www.synapse-energy.com/project/consumer-costs-low-emissions-futures>.
